WE STRIVE FOR CIRCULAR ECONOMY

THE MATERIAL

~60% RECYCLED

Currently approximately 60% of the raw material used to make FOAMGLAS® comes from recycled materials such as car windows and waste from our own factories. We aim to increase the use of recycled materials in our products.

THE PROCESS

ZERO WASTE

At our plant in Tessenderlo, Belgium, no production waste goes to landfill. It is reused as raw material in our own factory and as filling material for e.g. brick production, road construction and sound barriers.

We have deliberately chosen not to brand our wrapping to make the plastic easier to recycle.

NON-BRANDED PACKAGING

THE PILOT

DEVELOPING CUSTOMER WASTE SOLUTIONS

In Belgium we have been piloting customer waste solutions together with our customers. We bring the surplus material from the building site back to our factory and reuse it.
